Background

Call for action → huge market

Energy transitions

Starts with smaller vessels – shorter distance

- From rowing to sail to coal to oil
- Ongoing energy transition from oil to LNG

LNG

Topeka base-to-base vessel: The zero emission seaborn alternative

Topeka Nattruten

2,500 m² open deck RoRo vessel running on LH2

DESIGN:

- MAIN DIMENSIONS: 125 M LONG, 24 M WIDE
- CARGO CAPACITY: 56 SEMI TRAILERS
- SPEED IN SERVICE: 12 KNOTS
- LH2 TANK CAPACITY: 65-100 CBM

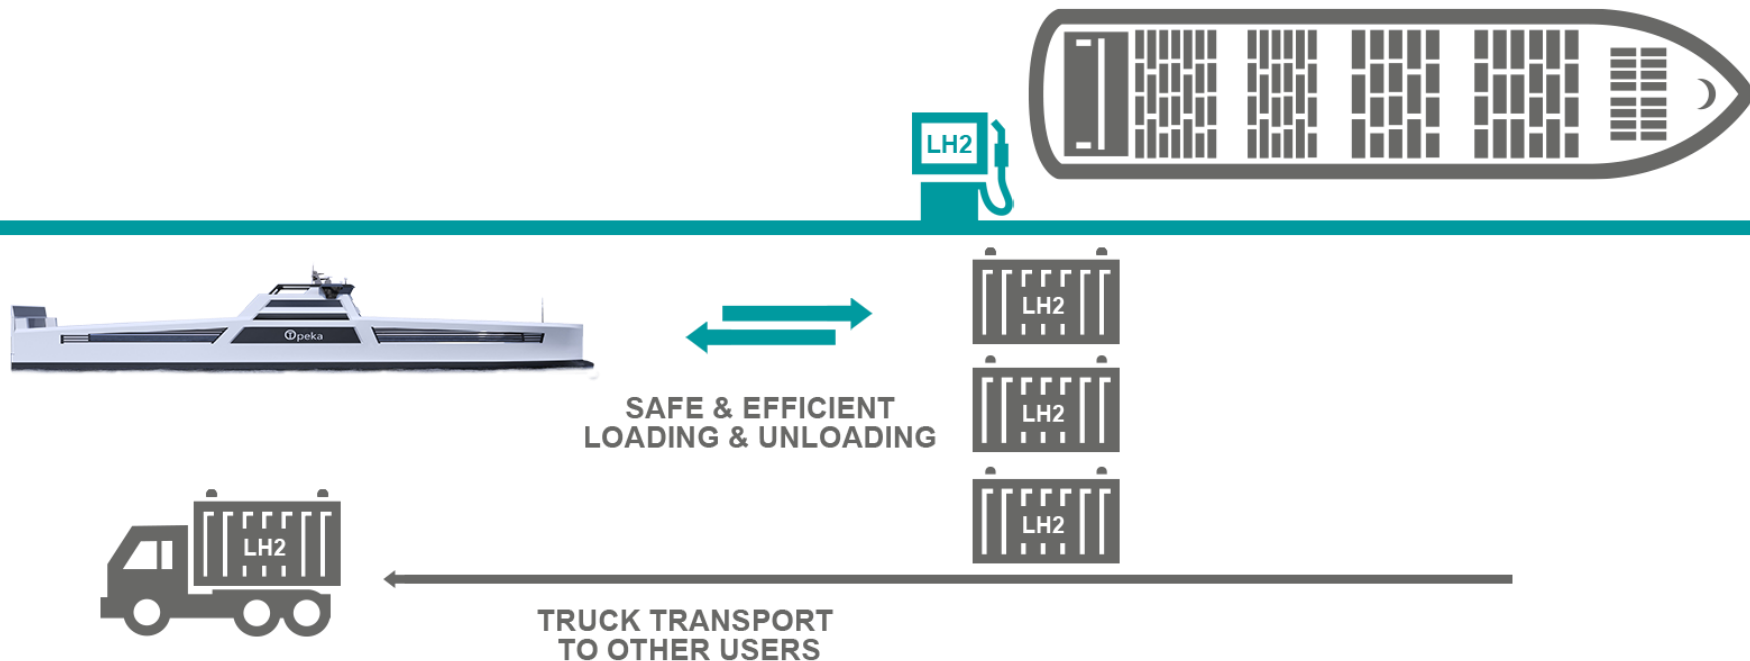

- POWER DEMAND: APP. 2 MW
- INSTALLED FUEL CELL CAPACITY: APP. 3MW
- DAILY LH2 CONSUMPTION: 1,2-1,4 T/D
- RANGE/ENDURANCE: APP. 400 NM

Aurora

A maritime liquid hydrogen value chain demonstrator

Distribute hydrogen to bunkering hubs between Stavanger and Kristiansund

HyShip DOCUMENTING LH2 AS MARINE FUEL

**FROM ROAD
TO SEA**

H2-DISTRIBUTION

EMISSION CUTS

Timeline

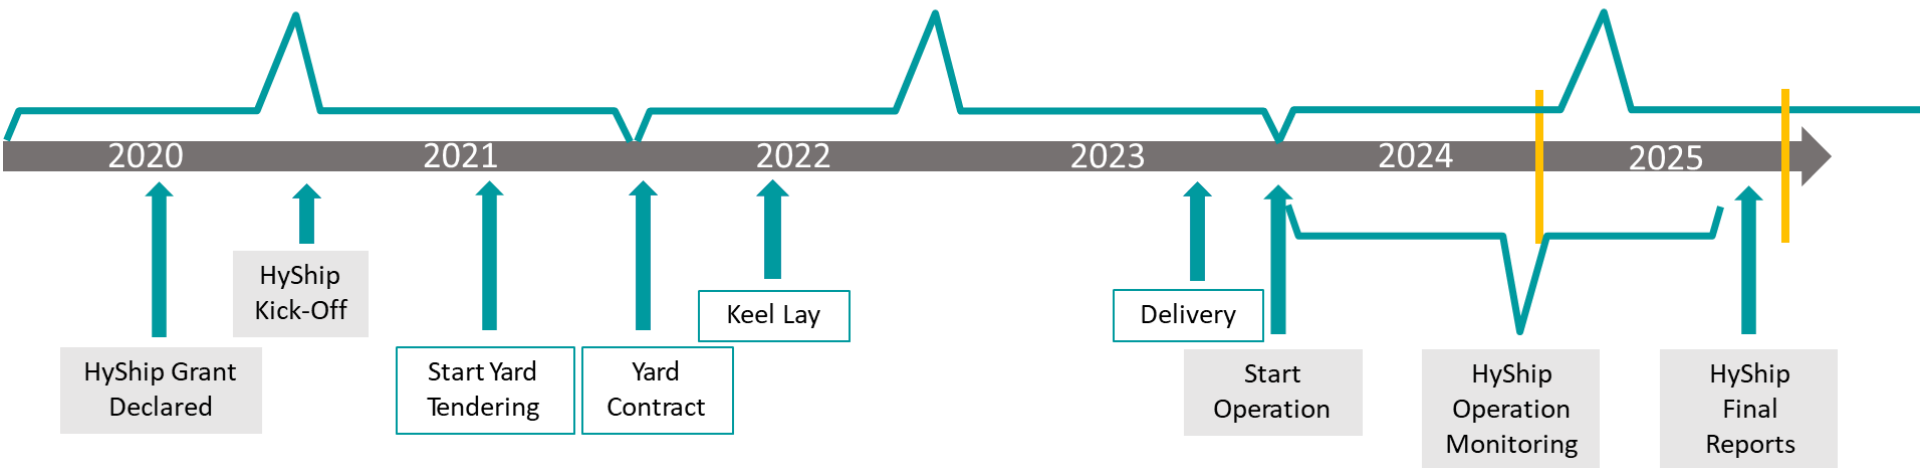

Establish market

- Build a strong business case
- Financing

Vessel Outline

Vessel design and construction
Operation and logistics perfection
Workflow/terminal operations
Logistic tenders and contracts

Commercial and
Technical Operation
